

# **Student Perceptions of Online Education**

Scott Mensch  
Indiana University of Pennsylvania  
Eberly College of Business and Information Technology

## **ABSTRACT**

The purpose of the study was to determine if students regarded online education and traditional face-to-face learning as equal methods when completing their course work. In the quest for preparing students for their future roles in the workplace many universities now offer traditional courses in an online format. Today's students have more options when choosing how they will complete their classes. Expectations are that online education and traditional face-to-face course will have the same quality and satisfaction as the course material and objectives will remain the same. This study provides information about student's opinions and satisfaction levels of online classes at Indiana University of Pennsylvania.
